2 FOREWORD

2.1 Publishing information

This document is published by National Highways.

This document superseded GG 000, which is withdrawn.

2.2 Contractual and legal considerations

This document forms part of the works specification. It does not purport to include all the necessary provisions of a contract. Users are responsible for applying all appropriate documents applicable to their contract.

3 INTRODUCTION

Changes introduced in this revision of the index of DMRB documents.

3.1 Published

1. **CS 469 Version 1.0.0** - Management of scour and other hydraulic actions at highway structures.

Public Notes:

CS 469 replaces BD 97/12. This document has been rewritten to make it compliant with the new National Highways drafting rules. The major technical updates in this document include:

- (1) the definition of scour susceptible structure has been amended to also include: (a) structures on the floodplain but not over or adjacent to water; and (b) structures at a location [not over or adjacent to water] where significant surface water flooding has occurred;
- (2) the scope has been clarified for scour and other hydraulic actions on structures, including: (a) scour in non-tidal rivers, tidal rivers and estuaries; (b) horizontal and vertical forces on structures due to hydraulic actions; (c) debris accumulations at structures; and (d) flood flows caused by rapidly melting snow;
- (3) the scour Level 1 assessment process has been updated;
- (4) the scour Level 2 assessment process has been updated;
- (5) the method for calculating the peak flow rate at a structure has been updated, including the fluvial component and tidal component of the assessment flow and the catchment response time;
- (6) the climate change allowances have been updated, so they are in accordance with UKCP18 climate change allowances published for the UK;
- (7) a requirement to assess the consequences on stream or river flow rates due to very rapid melting of snow (in the catchment upstream of a structure) after severe winter weather, has been introduced;
- (8) the method for estimation of scour depth now also includes implementation of the results from University of Southampton and University of Exeter research projects on scour caused by woody debris accumulations close to a structure in a stream or river;
- (9) the assessment of vulnerability of the structure to other hydraulic actions has been updated;
- (10) the assessment of channel stability has been updated;
- (11) management of risk due to scour and other hydraulic actions on a structure has been updated; and
- (12) a requirement for a scour assessment certificate to be completed, for a scour Level 2 assessment, has been introduced.

Supersedes:

1. BD 97/12 - The Assessment of Scour and Other Hydraulic Actions at Highway Structures **3.4.21**
2. IAN 173/13 - Implementation of BD 97/12 - The Assessment of Scour and Other Hydraulic Actions at Highway Structures

2. **GG 000 30-Apr-2024** - Design Manual for Roads and Bridges index **0.1.1**

Public Notes:

Amends and supersedes index dated 29-Feb-2024

Supersedes:

1. GG 000 29-Feb-2024 - Design Manual for Roads and Bridges index **0.1.1**

4 SCOPE

This document lists, by discipline and asset lifecycle, an index of the documents in the DMRB, their legacy decimal references and date of issue. All information is correct as of April 2024.

Legacy decimal references are expressed with reference to the volume, section and part of the DMRB, which was the format used to structure the DMRB prior to March 2020. This information is included in the short-term to aid the transition to the new DMRB structure and will be phased out in future revisions.
